

LAU-128 MISSILE RAILS

The LAU-128 missile rail was developed to launch the AIM-120 Advanced Medium-Range Air-to-Air Missile (AMRAAM). The AIM-120 entered service with the U.S. Air Force in Sept 1991.

The LAU-128 is used by both the F-15A/B/C/D Eagle & F-15E Strike Eagle.

The LAU-128 can launch the AIM-120 A/B/C AMRAAM and the AIM-9 L/M/X Sidewinder Air-to-Air Missiles. The rail can also carry tactical pods such as the ACMI pod, and for the F-15E, the FACE pod.

Designed to fit the Hasegawa & Revell F-15 kits.
