

BRU-57 Smart Bomb Rack

The BRU-57 is a multiple carriage bomb rack that effectively doubles the number of smart weapons that can be carried by tactical strike aircraft.

GPS guided weapons such as the JSOW, JDAM, and WCMD require a digital connection to an aircraft's main data bus so that the carried stores can communicate with the aircraft. The BRU-57 is used by the USAF and is a modified Navy BRU-33 CVER with new electronic interface and BRU-46/A ejector units. The smart rack can carry up to two 1,000lb class weapons.

Currently only USAF F-16 block 40 & 50 CCIP upgraded jets use the BRU-57

Designed to fit the Tamiya F-16 kits.
